

## Tracking Dyes in WGS Workflow: A Colorful Route to Sequencing Success

With WGS workflows, as is the case with all scientific investigations, your experiment is only as good as your control. The Invitrogen™ Collibri™ PCR-Free PS DNA library prep kits for Illumina™ systems includes tracking dyes, for the highest success rates and avoiding costly mistakes.

### Current internal controls fail WGS workflows

- Primarily end-point controls, indicating success or failure of experiment at the very end
- Can lead to waste of costly reagents and precious samples

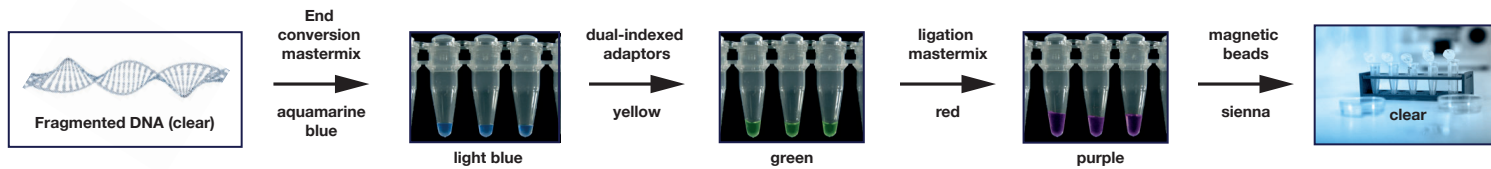

### Tracking dyes are the key to sequencing success

- Instant tracking of success or failure of reagent addition and mixing at each step of WGS workflow in real time
- No complex measurements or time-consuming detours

### Key visual feedback steps in Invitrogen Collibri DNA Library Prep Kits

### Detect errors in real time
